

Subbaramaiah Chevuru

Technical Lead – HCL Technologies

Phone – 8374127261

E-mail – ram.subaram@gmail.com

Summary –

As a Tech Lead bringing more than 7 years' experience in telecom Packet Core with MME, SGSN, Erlang and TTCN along with Automation with GTT and TTCN Framework. I am also experienced in Agile methodologies for efficient project delivery.

Professional Experiences

Technical Lead – Ericsson LOB, HCL Technologies

Duration – July 2020 – Till date

Design, Development, and Deployment:

- Participated in design and deployment of core network aspects of SGSN and MME nodes in particular with reference to control and user plane from functional testing viewpoint.
- Supervised network integration duties and migration of Packet Core nodes such as eNodeB, MME, SGW, SGSN in compliance of 3GPP standards.

Feature Validation:

- Successfully tested and validated 13 main features, including the roadmap features and customer-specific requirement modules, are verified on time.
- Increased availability and fault tolerance were achieved by checking each test use case while using redundancy scenarios.

Test Planning and Collaboration:

- Analysed Feature Specific Document (FSD) and actively participated in discussions with clients to understand use cases
- Worked closely with Development Team to maximise test coverage and drafted comprehensive test plans with a focus on client requirements
- Ensured the quality of Test Plans through rigorous reviews with Managers

Testing and Validation:

- To achieve feature capability and quality, prepared the Test Analysis Documents involving feature analysis and writing test cases for different Feature Specific Documents (FSD) with respect to several scenarios and environments.
- Automated test case execution had been carried out during the test while exercising GTT, TTCN and Simfast for issue reproduction and resolution on SGSN/MME nodes.
- Used Regression Testing to verify that all of the legacy feature functions were tested and verified against any regressions.
- Created and conducted tests for core network, provided technology support through Jira for greater problem solving.
- Performed functional and performance test for 2G/3G/4G solution in which I used toolkit like Wireshark, Erlang trace, Node dumps.
- Utilized Wireshark to examine network call flows and assist in troubleshooting and isolating the fault in any customer reported technical issues.

Lead Responsibilities:

- Performed the technical reviews for specification and test documents to check the features requirements with high quality.
- Provided knowledge transfer to the other team members as needed, as well as reviewed the test plans for coverage and quality of the product.
- Useful in the processes of solving problems during the end of releases to meet the deadlines.

Senior Software Engineer – Nokia LOB, HCL Technologies

Duration – April 2017 – June 2020

Core Network Integration and Support:

- Worked as an Integration Engineer for the O&M of customer projects such as Sprint (LTE & CDMA), CSpire (LTE), and Shentel (LTE site integration).
- Was responsible for migration and integration processes, done radio swaps at eNodeB's and BBUs, keeping handover signalled and system continuity.
- Implemented, configured and integrated BTS Site Manager as a part of Nokia's RITC Project. This entailed specific troubleshooting of the CPRI ports in the RRH and BBU sides which involve correction of connection problems and any other related problems affecting the performance of the system.
- Involved the client into offering elaborative problem solving whenever there were challenges that impacted the network and functioning throughout the various stages of deployment.

Project Details:**Project 1: Sprint with LTE & CDMA**

- Supervised the migration of LTE and CDMA sites in 31 markets between March 2017 and April 2019.
- Was directly involved in the functional testing of radio head and coordinate the exchange, integration and uninstallation of equipment such as SFPs, combiners and radios.
- Actively involved in the CDMA cabinet swaps and the deployment of new sites as per the dynamics of the various markets.

Project 2: CSpire (LTE)

- Successfully coordinated the transfer of multiple Alcatel sites to Nokia across 4 markets from April 2019 until the end of the project.
- Carried out functional testing and integration of the radio heads to the 1900MHz, 850MHz and 700MHz frequency bands.

Project 3: Shentel (LTE)

- Installed LTE integration sites and meaningfully done an investigation on various site related problems, problems were identified and solved thus improving the networks and systems performance.

Skills:

- **Programming Languages:** C, Erlang, Python (basics), C++
- **Networking:** MME, SGSN, eNodeB, 5G, LTE, GSM, QoS, Ethernet
- **Telecom Protocols:** S1AP, Diameter, NAS, GTP, 3GPP Standards (23.401, 29.272, 24.301)
- **Framework:** GTT, TTCN

- **Tools:** Wireshark, Simfast, BTS Site Manager, NetAct, RAS Client, URSA, Nokia SAM
- **Bug Tracking:** JIRA
- **Methodology:** Agile

Certifications:

- 4G LTE Architecture and Protocols – Udemy
- Erlang Programming – Udemy
- Master The C Programming Language – Udemy
- Core Network Integration and Testing (Nokia Certified)
- Testing & Delivery - SkillSoft

Education Details:

- Bachelor of Technology (B.Tech) – Electronics and Communication Engineering
- Priyadarshini Institute of Technology, Nellore – 2015
